

Active Social Systems

Movement, Play, Sports, and Gatherings

The active sections of the park are organized through a connected movement framework that links exercise, play, sport, and gathering. The primary loop acts as the project’s health infrastructure, guiding users through the site and connecting major anchors. Along this system, the exercise loop, play areas, and sports spaces create a range of active experiences that support both structured and informal recreation.

Material Character Notes

Paved loop surfaces
durable, legible, accessible

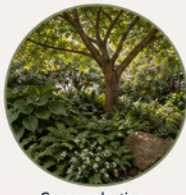

Timber seating / site furnishings
warm and social

Rubber / resilient play surfaces
active, safe, playful

Cobble / textured edges
grounded and site-specific

Canopy planting
comfort, shade, and seasonal use

Active Social Systems

Movement, Play, Sports, and Gatherings

These spaces are designed as social infrastructure as much as recreational infrastructure. Their visibility, overlap, and proximity to circulation make activity easy to see, join, and repeat. Gathering areas, event spaces, and shared recreation zones build a strong sense of public life across the site, turning movement into a catalyst for community interaction, social exercise, and repeat visitation.

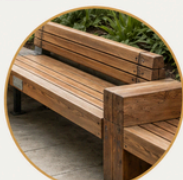

Splash Pad + Fountain Material Notes

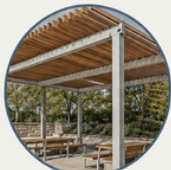

Splash pad surfacing
safe, active, durable

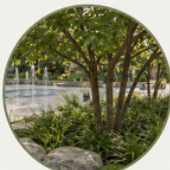

Stone fountain edge
grounded, cooling, tactile

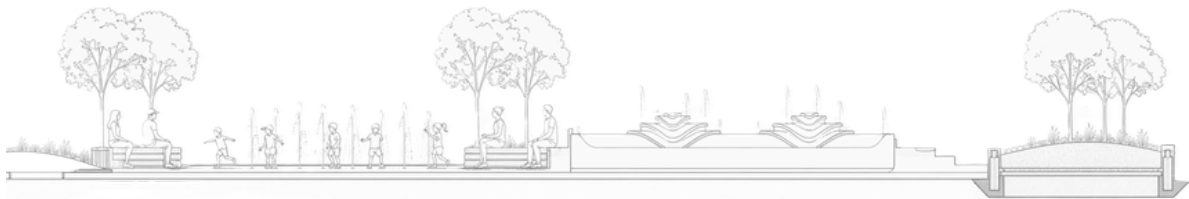

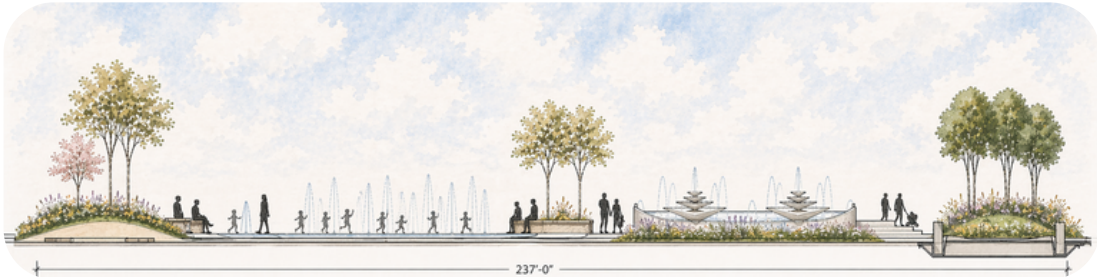

Timber benches
warm, social, durable

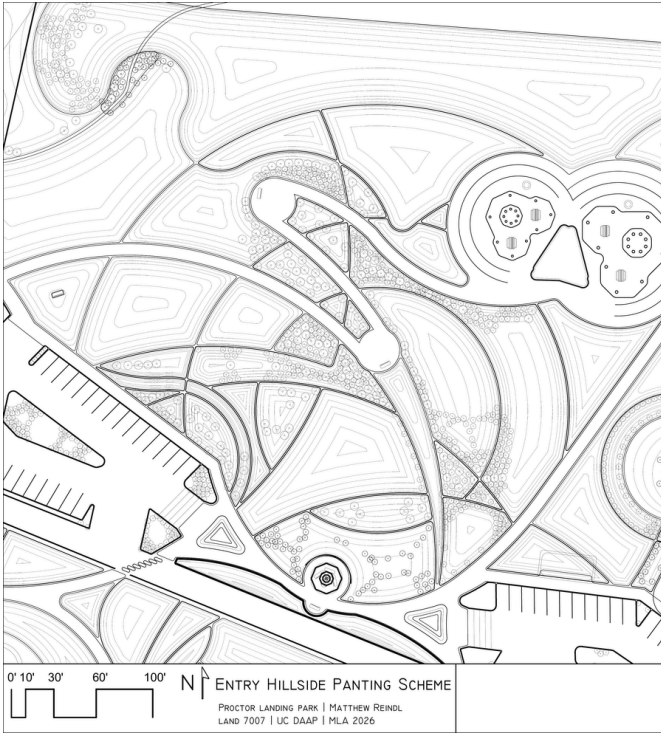

Shade structures
comfort, shelter, gathering

Canopy shade planting
shade, comfort, seasonal use

Civic and Active Design Details

This highlights the material and spatial character of the park's active civic zones. The entry sequence, splash pad, dog park, canopy seating areas, and active recreation spaces use a durable but welcoming design language that balances accessibility, comfort, and repeated public use. Hardscape is legible and resilient, while planting and shade elements soften these spaces and improve thermal comfort.

Together, these features establish the park's most public-facing identity. These areas are designed to feel open, social, and easy to use, with materials that support movement, gathering, and visibility while still tying back to the broader landscape character of the site.
