

Proctor Landing Park

Bridging Community & Ecology to Support Public Health

Introduction

Proctor Landing Park is a public health landscape proposal for a flood-prone river corridor in Lawrence County, Ohio. Positioned between the Ohio River, Paddy Creek, and Symmes Creek, the site is treated not as leftover open land but as civic infrastructure capable of supporting movement, community life, ecological performance, and long-term resilience.

The proposal organizes the park around a central ecological core and a connected movement framework. Wetlands, riparian restoration, flood-tolerant open space, and visible water systems are paired with an accessible exercise loop, social gathering nodes, flexible recreation areas, and shaded rest spaces. Public health is treated as the primary infrastructure of the project, while social and ecological systems operate as supporting infrastructures that strengthen physical activity, mental restoration, and everyday community use.

This booklet compiles research, inventory and analysis, conceptual design, performance metrics, and design development work from the capstone studio sequence. It moves from site and evidence, to concept and measurement, to design resolution and implementation.

About the Designer

Matthew Reindl is a Master of Landscape Architecture candidate at the University of Cincinnati College of DAAP in the School of Planning.

His work centers on public health, ecological performance, and the civic role of landscape architecture. His design interests include flood-adaptive park systems, native planting strategies, fabrication, digital visualization, and the translation of research into clear public-facing design.

He is especially interested in how 3D modeling, both physical and digital, can help translate complex site systems into legible and engaging landscape experiences.

This capstone reflects a broader interest in how landscapes can function as both infrastructure and experience. Rather than separating recreation, ecology, and social life, this work looks for ways these systems to operate together through measurable design decisions.

Proctor Landing Park serves as a test case for that approach: a landscape where circulation, water, habitat, and community use operate as one integrated public system.

Table of Contents

Front Matter

- i. Front Cover
- ii. Introduction
- iii. About the Designer
- iv. Table of Contents

Section 1 | Site + Community Context

- 5. Site + Community Context
- 7. Site Selection
- 8. Regional and Community Context
- 9. Public Health Risk Context
- 10. Local Site Context and Access Gaps
- 11. Floodplain, Hydrology, and Soils
- 12. Recreational Diversity Gap
- 13. SWOT and Opportunity Synthesis
- 14. Project Framing

Section 2 | Research + Precedents

- 17. Research + Precedents
- 18. Research Question and Method
- 19. Case Study 01 | Kashmir Park, Bradford
- 20. Case Study 02 | The 606, Chicago
- 21. Case Study 02 | Performance, Benefits, and Cautions

Section 3 | Design Vision & Concept Development

- 24. Design Vision & Concept Development
- 25. Design Vision
- 26. Concept Development
- 27. Diagram Evolution
- 28-29. Master Plan

Section 4 | Design Systems & Details

- 32. Design Systems & Details
- 33. Design Systems Overview
- 34-35. Ecological Core
- 36-37. Active Social Systems
- 38. Civic and Active Design Details
- 39. Paddy Creek Bridge & Culvert Crossing

Section 5 | Implementation, Performance & Closing

- 43. Materiality and Landscape Character
- 44-45. Woodland, Upland and Wetland Planting Designs
- 46. Site Metrics and Area Takeoffs
- 47. Pro Forma Structure & Planning Cost Anchors
- 48. Phasing and Implementation Timeline
- 49. Impact Metrics
- 50. Closing
- 51-52. Works & Image Cited

Section 1 | Site + Community Context

This section establishes why Proctor Landing Park matters, what pressures shape the site, and which baseline conditions the design is intended to change. It moves from site selection and community context to floodplain dynamics, ecological systems, and existing conditions, establishing the evidence base for the project.
